

PRIMO SUSTAINABLE PRODUCTS

Product Data Sheet

Primo Fine Marmorino

Primo Fine Marmorino is an all natural green building product. It is produced from a mixture of high quality calcium carbonate lime, marble and other organic binders. This all natural product offers the applicator a wide range of options in producing rich and luxurious finishes.

Application

Primo Fine Marmorino is applied onto drywall or existing plaster or cement substrate. We highly recommend that this product be applied over Primo Prep Coat. The Primo Prep Coat provides a surface that the Primo Fine Marmorino can adequately adhere to. Failure to follow this step could result in the finish not adhering to the surface. Primo Fine Marmorino is applied with a stainless steel trowel and can be used in one coat applications for base coats or 2-3 coat applications for use as a finished product. The standard method of application is as follows: Brush, roll or spray Primo Prep Coat on surface and let completely dry. Trowel a thin coat of Primo Fine Marmorino over surface being sure to pull tight to remove any chatter marks. Let this coat dry overnight. Apply second coat of Primo Fine Marmorino using artistic troweling technique. After this coat has absorbed the moisture a very thin third coat may be applied and burnished. After the finish has completely dried (at least 24 hours) a coat of Primo Cera Wax Sealer may be applied for protection and to enhance the look of the finish.

All of our plaster products come untinted. We highly recommend the use of natural earth pigments to tint the plasters. Some liquid universal tints can react with lime and can cause the finish not to adhere to the surface. Make sure to test adherence if using universal tints.

Color: Naturally white in color

Flash Point: None

Composition: Calcium carbonate lime putty, fine marble aggregate, proprietary mixture of other natural binders

Health Hazards: Avoid continual contact with skin or eyes. Always wear safety glasses and rubber gloves when handling mixture. Prolonged contact may irritate skin. Direct eye contact can cause permanent damage to vision. Do not ingest or inhale product. If product comes in contact with skin, wash off with soap and water. If contact with eyes occurs, flush with water and contact a physician. If product is ingested, drink plenty of water and contact a physician.

Product Handling: Whenever possible contain and sweep up spillage. Product contains alkaline material. Dispose of product in accordance with Federal, State and local regulations.
